

Excel

How can I change the AutoRepublish settings of an Excel file?

AutoRepublish is used to save a copy of a part of the Excel file to a webpage everytime you save the file.

What if you want to change the settings?
(Excel 2010)

- 1) Select "Save As Single File Web Page"
- 2) Click the button 'Publish'
- 3) Choose "Previously Published Items" (Use the selectbox left of the button "Choose")
- 4) It seems you have to click 'Publish' everytime you make a change to make it last. So if you have several areas you want to publish you will have to click a lot.

NB:

If you open a file with AutoRepublish settings in Microsoft Excel for MAC and ignore the warning your autorepublish settings will be lost.
